

📌 DAY 1 PROMPT (Basic Setup + Canvas + Display)

Design and implement the initial structure of a **menu-driven 2D Graphics Editor in C** using a **2D character array as a drawing canvas**. The canvas should be initialized with the character `_` (underscore), representing an empty drawing area.

The program should include functions to:

- Initialize the canvas with `_`
- Display the canvas on the screen using a 2D grid format
- Create a basic menu-driven structure using a loop and switch-case

At this stage, no drawing functions are required. The main goal is to set up the **canvas system and display mechanism**, which will be used for drawing graphics in later stages.
