

📌 DAY 3 PROMPT (Circle + Clear + Final System)

Complete the 2D Graphics Editor in C by adding advanced functionality and final integration.

Implement:

- A **circle drawing function** using center coordinates and radius (using distance formula approximation)
- A **clear canvas function** to reset the drawing area back to _

Ensure all previously implemented shapes (line, rectangle, triangle) are fully integrated into the system.

The program should now support a complete **menu-driven interface** where users can:

- Draw multiple shapes
- View the canvas
- Clear the canvas
- Exit the program

The final system should behave as a simple **ASCII-based graphics editor using a 2D array canvas**.
